Ahmed Abdul-Ghani El-Bialy

Junior Mobile Developer | Junior Flutter Developer

ah.elbialy.dev@gmail.com | +20 102 212 1573 | El Mansoura, Egypt (Open to Relocation) | LinkedIn | GitHub | YouTube | Portfolio

Summary

Junior Flutter Developer who has independently built 6 Flutter mobile applications, including one published on Google Play, using Clean Architecture, BLoC/Cubit state management, and REST API integration. Currently pursuing a Bachelor's in Artificial Intelligence at Kafrelsheikh University. Seeking a junior Flutter developer role.

Work Experience

CodeAlpha – Flutter Development Trainee June *2026 – July 2026*

Completed hands-on Flutter development training, independently building two full mobile applications applying Clean Architecture, Cubit state management, and local/API data persistence.

- Built Revio, an offline-first flashcard app using Hive local storage, Cubit state management, and Clean Architecture.
- Built Quotely, a minimal dark-themed app that fetches random quotes from the API Ninjas public REST API using Cubit, Retrofit with Dio, and a feature-based layered structure.

Sprints x Microsoft Summer Camp – Mobile Development June *2025 – July 2025*

Completed 45+ hours of Flutter and Dart training through the Sprints x Microsoft Summer Camp, gaining hands-on experience in building mobile applications and understanding core software development concepts.

- Completed 45+ hours of training in Flutter and Dart fundamentals.
- Learned core mobile development concepts, widgets, layouts, navigation, and responsive UI design.
- Built beginner-level applications and gained hands-on experience in developing mobile user interfaces.

Projects

Revio – Flashcard Learning App GitHub Demo Google Play

A dark-themed, offline-first Flutter flashcard app with topic management, a searchable library, and Multiple Choice and Smart Typing quizzes powered by a custom typo-tolerant answer matcher. Built with Clean Architecture, Cubit state management, and Hive CE.

- Architected feature-based Clean Architecture with dedicated home, add-card, review, quiz, and topics modules, using Cubits with explicit state classes (Initial/Loading/Success/Error for card operations; ModeSelection/InProgress/Completed for quizzes).
- Implemented offline-first persistence using Hive CE with a reactive stream-based repository that keeps the dashboard, library, and quizzes in sync in real time.
- Engineered a custom answer matcher (exact, numeric, partial, and Levenshtein fuzzy matching) powering Multiple Choice and Smart Typing quizzes with hints, shuffle, live scoring, and an animated CustomPainter results screen.
- Built topic management (create, rename, delete with automatic card reassignment) and a library with search, topic and favorites filters, and confirmed swipe-to-delete, styled with a custom dark Material 3 theme and responsive layouts via flutter_screenutil.

Movura – Movies & TV Shows Discovery App GitHub

A movie and TV show discovery app built on the TMDB API, with trending and top-rated catalogs, multi-type search, and details screens covering cast, reviews, trailers, and similar titles. Features a dark neon-cyan UI with Sliver-based layouts and shimmer loading states.

- Designed feature-based Clean Architecture with isolated home, search, and details modules, using BLoC/Cubit for state management and GetIt for dependency injection.
- Built the data layer on the TMDB API with Retrofit and json_serializable, plus debounced multi-type search across movies, TV shows, and people.
- Integrated YouTube trailer playback with full orientation support, lifecycle-aware controller management, and safe back-gesture handling for a seamless video experience.
- Loaded TMDB credentials from a .env file with flutter_dotenv and built a custom dark design system with a neon-cyan palette, three custom fonts, and reusable PosterCard components.
- Added shimmer skeleton loaders and CachedNetworkImage caching across the grids, lists, and details screen.

Vibrant-store – E-Commerce Mobile Application GitHub Demo

A Flutter e-commerce app using the DummyJSON API, with a product grid, category browsing with chip filters, product details with customer reviews, an in-memory favorites toggle, and a persistent bottom navigation bar.

- Built horizontal category filter chips, a category search field with input validation and SnackBar feedback, and an in-memory favorites toggle.
- Designed a modular presentation layer with a custom global ServicesBar for persistent bottom navigation, utilizing flutter_screenutil for cross-platform layout responsiveness.
- Architected a reusable Service Layer using Dio HTTP client with defensive null-safe JSON parsing for nested product and review models.

Sky-Cast GitHub Demo

A weather app built with Flutter and WeatherAPI.com, with current conditions, autocomplete city search, and a UI whose colors adapt to the weather. Uses Cubit for state management and Dio for networking.

- Configured native splash screens and adaptive launcher icons with flutter_native_splash and flutter_launcher_icons, including Android 12+ support.
- Built a weather-adaptive theme with 6 MaterialColor palettes and automatic text-contrast switching.
- Integrated WeatherAPI Search with real-time city autocomplete and custom SearchDelegate.

News Cloud GitHub Demo

A news app built on the NewsData.io API, with a breaking-news feed, five categories, country filtering for sports, and in-app article reading. Supports Arabic content with the Cairo font and uses Sliver-based layouts and image caching.

- Integrated NewsData.io for headlines with multi-category browsing and country filtering for the Sports category.
- Built RTL Arabic news reader with Cairo font, WebView integration, and country-filtered headlines.
- Generated compile-time safe API clients via Retrofit + build_runner automation.

Shaats GitHub

A real-time chat app built with Flutter and Firebase, with email/password authentication and live message updates through Firestore streams.

- Streamed messages from Cloud Firestore into the chat screen in real time using StreamBuilder.
- Designed distinct sender and receiver message bubbles with auto-scroll to latest messages, ensuring smooth UX during active conversations.
- Added email/password sign-up and sign-in with Firebase Auth, including form validation and loading overlays.

Education

Bachelor's Degree – Faculty of Artificial Intelligence *Oct 2023 – Jun 2027 (Expected)*

Department | Kafrelsheikh University — Kafr El Sheikh, Egypt

Relevant Coursework: Programming Fundamentals (C++), Object-Oriented Programming (OOP), Data Structures, Clean Architecture Fundamentals, Software Design Pattern, Cloud Computing, Operating Systems, Databases.

Technical Skills

Programming Languages: Dart • C++
Frameworks: Flutter (Android, iOS) • CustomPainter • Material 3
Databases & Local Storage: Firebase • Hive • Shared Preferences • Offline-First Persistence
State Management: BLoC • Cubit
Architecture: Clean Architecture • MVVM • SOLID Principles • Design Patterns • Dependency Injection (GetIt)
APIs & Services: REST APIs • Dio • Retrofit • Code Generation
Tools & Platforms: Git • GitHub • Postman • Figma • Android Studio • VS Code
AI Tools: ChatGPT • Claude • Gemini • Grok • Cursor • GitHub Copilot • Antigravity

Certifications

Complete Flutter & Dart Development Course [Arabic] – Udemy *2026-04*
Sprints x Microsoft Summer Camp – Mobile Development – Sprints x Microsoft *2025-07*

Languages

Arabic (Native) **English** (Intermediate)
